 5:09 15.dxe5 27 Qd8 9:14

[Stockfish thought Qc7 was best and I did consider Qc7 to win the e-pawn but white gets clear compensation because of the awkward placement of my queen, lack of development, and weakness of the e6 pawn. For example, I was not comfortable with the following continuation: =15...Qc7 16.Rc1 Qb8 17.Re1 Nxe5 18.Nb5 Nc6 19.Bd3 Bd7= ]

16.Nb5?! 8:13 This is a dubious attempt to reposition the knight on d4, but it simply loses a pawn. Best is simply 16 Rc1.

**21.Qg3?! 1:46**

[20 ...Nc4 was a mistake, because white can dislodge my knight and get strong counterplay on my weakened squares on the c-file. This seems very pleasant for Black. The  
e6 pawn is a bit backwards and I  
thought about playing e5, but I also  
realized 8... d4 would force the White  
knight back to b1. So I decided to try to  
play against the queenside a bit, but this  
eventually let White back into the game.  
**8...d4 9.Nb1**

[If 9.Ne4 then I capture and  
eventually win the f2 pawn, although  
10... Qa5 is an important intermezzo  
that I had missed over the board.) ]

**9...Qb6 10.Qc1 h6 11.Bxf6**  
The computer suggestion 11... gxf6  
would have been fun! **11...Bxf6**  
**12.Nbd2** Ok I admitted to myself that I  
no longer had an advantage, so I had a  
mental reset. My plan is now to castle  
and push the e-pawn. The computer is  
largely happy with my play until I miss a  
tactic. **12...0-0 13.0-0 e5 14.Ne4 Bf5**
