This is considered the Main Line of the Alapin, or c3 Sicilian, by various authors including Kotronias in his Grandmaster Repertoire Series book. Beating the Anti-Sicilians (2015). **11.Bxd5?** As per the Greek GM, this is pretty bad, his comment being "the only question being the extent of Black's plus."

[He gives the following 4 moves, in increasing complexity if not strength:

11.--]

[11.exd6]

[11.Qg4]

[11.Re1]

[11.Bd3 f5 12.exf6 Nxf6 13.Qe2 Qb6! with another couple columns of analysis. (13...Qa5!?)]

[A better try for an advantage is 13...Bc6! 14.Qe2 Bxf3 15.gxf3 Qb6 Kotronias's "Black has an obvious

advantage" is probably fair enough, whether it is enough to win is unclear. Stockfish makes it around -0.4.]

14.Qe2 Bf5 15.Ne1 Qb6

[15...Nxa2! right away doesn't let the pawn get away, and is balanced.]

16.Be3

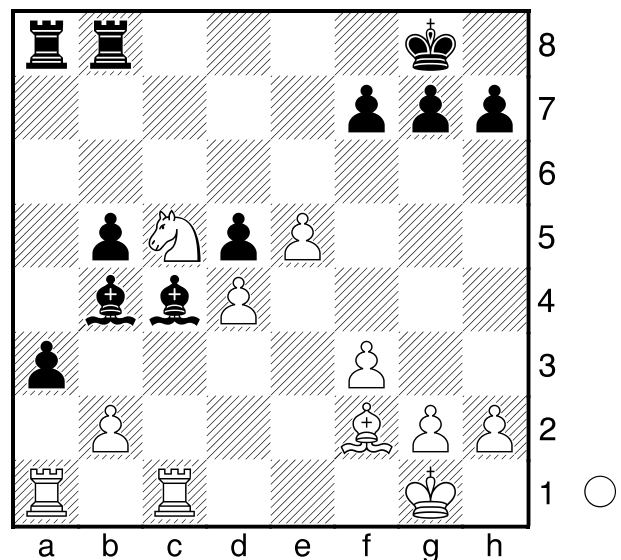

[16.a3 Nc6 17.Be3 keeps the pawn but not any significant advantage. Stockfish generates Rad8 18.Nc3 Nxe5 19.dxe5 d4 20.Bxd4 Rxd4 21.Nf3 Rd3 and White doesn't have enough of an edge to turn = into ± (+= if you don't get the Chessbase font).]

31...Bxc5?!

[31...a2!! 32.bxc4 bxc4! Stockfish says -5.31 (d27). It's at times like this that I wonder if there's a big bug

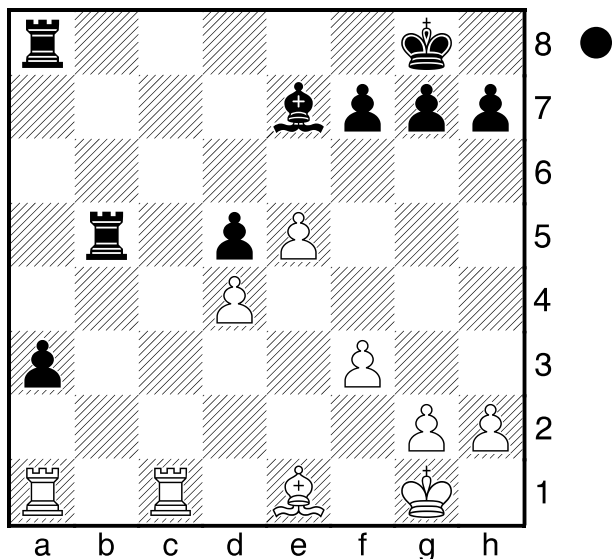

in the latest update or something.]

14.Ne4 I've played this successfully before (putting aside my standard Panov-Botvinnik Attack), but on this day I just didn't seem to have it all together. Instead of getting some attack going on the kingside I just traded queens. The theory is that the experienced player will prevail in the ending; in practice, this time at least, Lucas all but outplayed me in the ending. We both missed a thing or two, but he saw clearly that the simplifications, "all the way" to king and pawn, weren't bad for him at all.

 I can't maintain the knight on e4 so better exchange it **14.Qxd2 Bb6 15.c3**
 I thought this was an excellent move. My plan is c5 → d4 so c3 prevents it completely **15...Qe7** Because sacking the LSB if e6 does not work, I bring my queen to threaten f6. With SF, I know realize f6 immediately was possible with the strong c5 follow-up
 [15...c5 16.Nb3 c4 SF gives it equal but I estimated I weaken the d4 and c5 squares too much so I wasn't a big fan 17.Nc5]
 [15...f6 16.e6 Bxe6?? (16...c5! This is what I missed, pushing f6 with

the idea of c5 immediately after e6 is the correct idea) 17.Nxe6 Bxe3+ 18.Qxe3 Qe7 19.Rfe1 Rfe8 20.Qg3 This does not win the knight back]

16.Rae1 f6 17.e6 My database confirms we just played 17 moves of theory (!) **17...Bxd4??** Ready to give up the bishop pair to get rid of the annoying knight on d4

[17...c5! The critical and recurrent idea to "free" Black 18.exd7 (18.Nb3 I thought about this variation but for some reasons only considered that I have to push d4 here) 18...cxd4 19.Bxd4 Qxd7 With an equal position]

18.Bxd4 And this is when I realized I messed up. I completely overlooked that White can take with the LSB and this opens the e file for the rook to attack my queen. This is obviously very bad. White will easily completely blockade my queenside and have all freedom to start the kingside attack.

[18.cxd4 Bxe6 Fine for black]
[18.Qxd4 Bxe6 Also fine]

18...Bc8 Well, after this blunder I knew I was busted. My pieces are completely paralyzed and disorganized

[18...Bxe6 19.f5 Losing material]

30...Bd3 Losing 2 pawns soon but at least I try to reroute the bishop to e4

31.Qxc7 Be4 32.Qxc6 Qf7 I resigned immediately. After the blunder in the midgame the position was impossible to defend for Black as the dark square are way too weak and White can easily blockade my entire queenside. Hats off to my opponent for a brilliant conversion, a good lesson learned.
